EDUCATION

Singapore University of Technology and Design (SUTD)

Sep 20 – May 24

- Bachelor of Engineering (Computer Science and Design), Honours
- Focus Track: Data Analytics, Minor in Artificial Intelligence

WORK EXPERIENCE

Software Engineer at HCLTech

Jul 24 – Current

- Built and maintained web application interfaces using semantic HTML, CSS, and JavaScript (Xrm API) within Microsoft Dynamics 365 model-driven apps, including custom forms, views, and ribbon commands.
- Diagnosed and resolved performance bottlenecks and complex issues spanning UI rendering, browser behaviour, background processing, and cloud infrastructure.
- Worked effectively in large, shared TypeScript and JavaScript codebases, understanding system boundaries and safely extending existing architectures.
- Collaborated closely with engineers and stakeholders to deliver reliable, scalable web software systems.

Software Engineer Intern at ZumVet

Aug 22 – Dec 22

- Built and enhanced React components in TypeScript for a web application enabling online pet consultations and pet health management, applying semantic HTML and CSS best practices throughout.
- Developed and optimised RESTful APIs using Express.js for seamless API integration between frontend and backend; wrote automated unit and integration tests with Jest to ensure reliability and performance.
- Identified and resolved rendering and data-flow performance issues across the React application, improving page responsiveness and user experience.
- Managed and queried data on a MySQL server using DBeaver, ensuring data accuracy and integrity across application features.

ACADEMIC PROJECTS

Freight Tracking and Analytics Dashboard

Sep 23 – Apr 24

Aramco X SUTD

- Led development of a full-stack web application using React and JavaScript (Gin backend), applying semantic HTML and CSS to build responsive, accessible UIs for real-time tracking of vessel, port, refinery, and weather data.
- Designed and implemented intuitive, performant user interfaces using core web and browser APIs, UI/UX design principles, and component-driven architecture to optimise data visualisation and user experience.
- Authored and executed end-to-end integration tests each release cycle and led user feedback analysis sessions, catching regressions early and eliminating critical bugs before deployment.

Event Detection in News Articles

Jan 23 – Apr 23

Singapore University of Technology & Design

- Conducted thorough data preprocessing, including feature engineering and label enhancement, to improve model performance.
- Explored and fine-tuned transformer-based models (BERT-tiny, ALBERT, RoBERTa) for event detection, achieving state-of-the-art results.
- Implemented model training and evaluation pipelines utilising TensorFlow and Hugging Face Transformers.

CO-CURRICULAR

SUTD Basketball Men's Team — Captain

Jan 21 – Feb 22

- Led and represented SUTD in SUniG and IVP competitions, promoting teamwork and sportsmanship. Organised recruitment and trials, fostering a cohesive team while balancing on-court leadership with academic development.

ADDITIONAL INFORMATION

Languages: JavaScript, TypeScript, HTML (semantic), CSS, LESS, Python, Java, SQL, Ruby, C, C++**Frameworks/Libraries:** React.js, Node.js, Express.js, Redux, Prisma, Gin**Testing:** Jest (unit & integration), End-to-End integration testing**Tools:** Git, Bitbucket, DBeaver, MySQL**Cloud:** Amazon Web Services – S3, Google Cloud Services
