EDUCATION

Singapore University of Technology and Design (SUTD)

Sep 20 – May 24

- Bachelor of Engineering (Computer Science and Design), Honours
- Focus Track: Data Analytics, Minor in Artificial Intelligence

WORK EXPERIENCE

Software Engineer at HCLTech

Jul 24 – Current

- Extended Microsoft Dynamics 365 (CRM) with API-driven customisations via the Xrm API — building custom forms, views, and ribbon commands that integrated directly into live business workflows.
- Collaborated closely with engineers and business stakeholders to translate requirements into reliable, scalable technical solutions within large shared codebases.
- Diagnosed and resolved production issues spanning UI rendering, background processing, and cloud infrastructure, developing systematic debugging skills for complex distributed systems.

Software Engineer Intern at ZumVet

Aug 22 – Dec 22

- Designed and optimised RESTful APIs using Express.js, enabling seamless data integration between frontend, backend, and external services; managed relational data in MySQL.
- Built automated unit and integration test suites with Jest, establishing evaluation frameworks that ensured reliability across application features.
- Identified and resolved rendering and data-flow bottlenecks in a production React application, improving responsiveness and user experience.

PROJECTS

AI Japanese Conversation Tutor

2025 – Present

Personal Project

- Built a voice-first language tutoring app integrating three OpenAI APIs: Whisper (whisper-1) for speech-to-text, GPT-4o-mini for grammar correction with strict JSON schema structured outputs, and TTS (tts-1) for synthesised tutor replies.
- Engineered a detailed system prompt defining tutor persona, error correction gravity levels, and grammar elicitation strategies to drive consistent, pedagogically sound LLM responses.
- Implemented conversation context window management, maintaining a rolling 6-turn history to preserve coherence across multi-turn sessions.

Freight Tracking and Analytics Dashboard

Sep 23 – Apr 24

Aramco X SUTD

- Spearheaded development of a full-stack web application using JavaScript, Gin, and React to enable real-time tracking of vessel, port, refinery, and weather data.
- Designed and implemented intuitive user interfaces leveraging front-end development expertise and UI/UX design principles to enhance user experience.
- Conducted extensive integration testing and user feedback analysis every release, eliminating critical bugs before deployment.

Event Detection in News Articles

Jan 23 – Apr 23

Singapore University of Technology & Design

- Fine-tuned transformer-based language models (BERT-tiny, ALBERT, RoBERTa) for multi-class NLP event detection, achieving state-of-the-art results.
- Implemented end-to-end model training and evaluation pipelines using TensorFlow and Hugging Face Transformers, including structured metrics for benchmarking model quality.
- Conducted feature engineering and label enhancement during data preprocessing to improve model reliability and reduce label noise.

CO-CURRICULAR

SUTD Basketball Men's Team — Captain

Jan 21 – Feb 22

- Led and represented SUTD in SUniG and IVP competitions, promoting teamwork and sportsmanship. Organised recruitment and trials, fostering a cohesive team while balancing on-court leadership with academic development.

ADDITIONAL INFORMATION

Languages: Python, JavaScript, TypeScript, SQL, Java, C/C++

AI / ML: OpenAI API (Whisper, GPT-4o-mini, TTS), Hugging Face Transformers, TensorFlow, Prompt Engineering, Context Window Management

Frameworks: React.js, Node.js, Express.js, Gin, Prisma

Cloud: Amazon Web Services – S3, Google Cloud Services

Tools: Git, MySQL, DBeaver
